

Medical Genetic Services FOR PATIENTS

A Clinical Geneticist is a highly trained Medical Doctor who cares for children and adults with genetic conditions. Empathy and counselling skills are an essential aspect of being a Clinical Geneticist.

Common reasons why families may require the assistance of a Clinical Geneticist include:

- birth defects and congenital malformations
- antenatal abnormalities detected in the baby
- chromosome abnormalities
- developmental delay and intellectual impairment
- syndrome diagnosis
- deafness and visual impairments
- reproductive genetics ie prenatal testing for genetic disease
- family history of genetic diseases
- familial cancer syndromes

Preconception screening for couples is a growing field of clinical genetics that maximises a couples reproductive choices, for more information visit:
